

Guard Tour

An Ascom Enterprise Solution for workplace safety

For increased safety and accountability

Keeping security or prison guards safe on their rounds is vital. Guard Tour helps deliver a safer workplace along with the ability to log activity and show that the required checks are carried out.

Better protection and better management

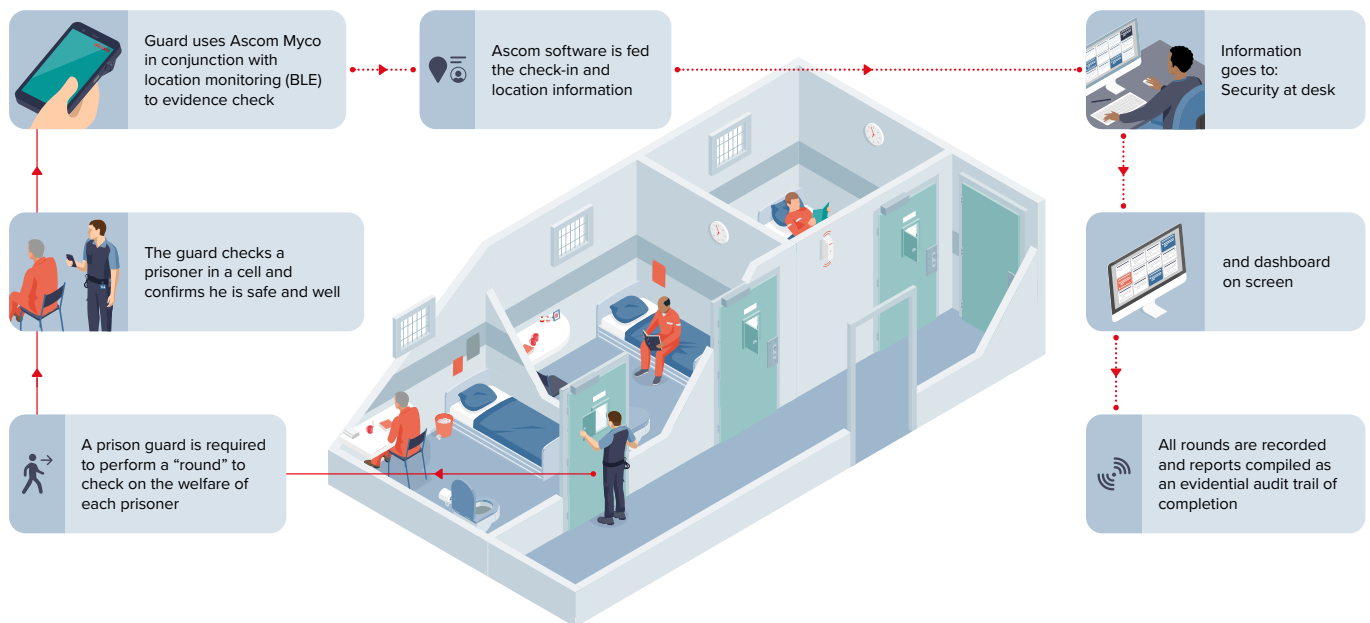

When guards make regular physical checks on property and goods or check on people such as prisoners to safeguard their health and wellbeing, they are often working alone in high-risk environments. As a result, it is vital to protect them as much as possible to:

- Reduce injuries, illness and deaths
- Make guards feel less threatened and more secure
- Attract and keep staff and reduce turnover
- Avoid operational consequences and costs from attacks
- Avoid illegal breaches of health and safety responsibilities

Separately, but also integral to their job, guards need to follow a pre-defined route or checklist and show evidence that the required checks have been carried out.

Guard Tour solution

With Ascom's solution, you can monitor and log routes through effective location and mapping technologies. As well as making it easy for staff to raise the alarm, giving them the reassurance that their safety is taken seriously and that help is never far away.

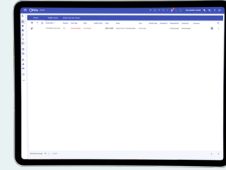

Key features

The Guard Tour solution is based on mobile devices with in-built staff safety features such as panic buttons to raise an alarm, real-time location technologies, alarm dashboards, incident mapping and mobile response workflows. Not to mention, the ability to check in at each required location and record evidence that the necessary tasks were completed.

Mobile Alerting

List View of current alarms

- System that adapts to your way of working
- Open system via API and ability to connect to other systems
- Seamless integration with other alarm sources and contextual information
- Wide range of location technologies from IR and LF to DECT location
- Supports location services from third-party vendors (BLE/Wi-Fi) maximizing ROI of existing technology
- Panic buttons available on a range of devices to suit your workplace
- Multiple options for support for mobile response workflows
- Configurable rounding dashboards — from simple list view to interactive map
- Enhanced logging and reporting of the complete trail in one view

Software and licences

The solution is based on Ascom Ofelia enterprise alarm and workflow management software. Ofelia software enables you to integrate with third-party systems for features such as location services and external alarm presentation, while it is HTML5-enabled to allow user access from any PC or screen.

Solution components

Mobile Devices	Item	Part No.
Pagers	a72	CHAT-XXXXXX
