

[PRODUCT INFORMATION]

Product:	Analogue Gateway – FXO-A8
	8 analogue ports
	SIP
	Partly preconfigured

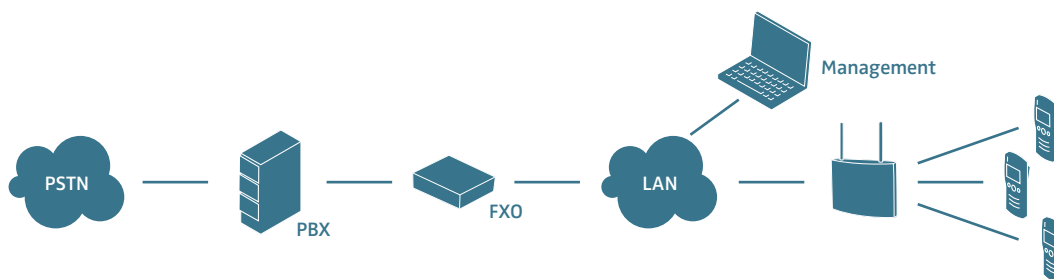

MAKING "SMOOTH MIGRATION TO VOIP" EVEN SMOOTHER

The FXO has an 8-port board, which makes it suitable for small and medium sized companies.

One of the key issues for many IT managers today is how to migrate to IP in a smooth way. Many companies have an analogue infrastructure working, and switching into VOIP is not only a costly business.

With the FXO (Foreign eXchange Office) operations can be integrated with the Ascom IP-DECT system enabling IP-DECT to work together with an analogue extension towards analogue PBX:es in a similar way as with traditional Radio Exchange technology. Any system can now be "IP-fied", even if it is connected to an analogue PBX.

Incorporating an FXO with your PBX system not only provides you with mobility, while still keeping your existing infrastructure, it is a primary cost-efficient first step to IP telephony.
