## ASCOM i75 ASSESSMENT EVALUATION OF VOWIFI READINESS

**Ascom i75 Assessment establishes your WLAN network's readiness for Ascom i75 systems. The service will provide your organisation with detailed reports about the performance of your WLAN infrastructure with recommendations on possible enhancements and improvements in your network.**

Misconfiguration and interference that affects voice traffic in your WLAN network can result in faulty behaviour or even costly downtime of telephony services until rectification. Exposure to these vulnerabilities can be reduced significantly by carrying out an Ascom i75 Assessment.

By performing an Ascom i75 Assessment prior to commissioning a system one can eliminate WLAN- and VoIP-related issues by identifying problem areas ahead of deployment. This service targets customers who are ready to deploy an Ascom i75 system where an edge in resiliency and reliability is a top priority.

Ascom i75 Assessment offers an extensive evaluation of VoWiFi readiness in your WLAN network from the vantage point of an Ascom i75 handset. Its sole purpose is to give your organisation a head start on targeting and resolving voice quality issues by locating bottlenecks and weak points in the WLAN network before commissioning a live Ascom i75 system.
