

Ascom Telligence patient devices — the ergonomic way to patient satisfaction

Ascom Telligence patient devices include bedside handsets ranging from basic single-button nurse call devices, to multi-button devices that combine nurse call functionality with TV, radio, window blinds and lighting controls.

Key benefits

- Patients can place a specific service request (water, pain, toilet, etc.) to the appropriate caregiver, helping to minimize response times. Caregivers come prepared to meet the patient's needs, reducing unnecessary steps.
- Advanced audio. Ascom Telligence lets you add speech by simply changing the handset. Staff can talk before they walk, saving valuable time.*
- Give your patients a voice. Clear telephone-style communication can help reduce stress for patients. Families are reassured their loved ones service requests are being heard.

- Maintain hygiene standards. All Ascom Telligence patient devices are designed to withstand repeated cleaning.
- New Ascom SafeConnect™ magnetic connector on all Ascom Telligence handsets helps prevent equipment damage. The connector easily breaks away when accidentally disconnected, and sends an alert if there is a problem.

Key features:

- Ergonomic, durable and suitable for cleaning with most standard hospital disinfectant methods.
- Available in a wide range of models ranging from basic nurse call to multi-functional devices capable of sending patient-selectable requests, and controlling TVs, window blinds and room lighting.
- Optional models support full-duplex audio with adjustable volume controls.
- Ascom Telligence patient handsets are certified dust and water resistant to at least IP65 rating.

The patient devices are used as components in Ascom Telligence solutions. Contact Ascom today to learn how Ascom Telligence can help hospitals and patients.
