**Unique .11n performance**
As one of the first VoWiFi handsets operating on an 802.11n network, the Ascom i62 is truly unique. It supports deployment of voice over the network without degrading the performance of an existing .11n network capacity.

**Superior interoperability**
As well as trouble-free WLAN vendor interoperability and scalability, the Ascom Solution has the capacity to integrate and communicate with a comprehensive range of external sources.

**Streamlined administration**
When it comes to system administration, our web-based Centralized Management system offers many benefits. Over-the-air updates reduce the workload of administrators and centrally stored settings simplify phone replacement and shared handset scenarios. As well as representing continuity and peace of mind for administrators and handset users, this provides increased value.
