Medanets - More time with the patient, less time with daily data.

At Medanets, we have always believed that smart mobile solutions can improve care quality and patient safety. This, in turn, leaves clinicians more time for taking care of the patient, which is most important of all. Dozens of projects over the past 10 years have shown that the benefits are real, thanks to which Medanets is the industry’s market leader in Finland.

Our solutions are developing and transforming health care processes and procedures. We improve care quality, make data available in real time, minimize human error and facilitate the actual work.

**How does it work?**

Medanets application for caregivers is used for point-of-care data recording so that data entries are updated into the Electronic Health Record and are immediately available to other caregivers. The mobile application enables viewing and recording patient data via smartphone or smart device. It also enables the caregiver to file patient details with the Ascom Myco. The handset’s integrated barcode scanner is used to quickly and securely confirm the patient’s identity by scanning his or her wristband. The application does not require a continuous network connection, and it works wonderfully in network dead spots as well.

**What can you do with the mobile application?**

- Vitals and other observations, fluids
- Medication browsing and administration
- Pain treatment monitoring entries
- Risk analyses and forms
- Early Warning Score
- Connections to patient monitoring systems (Philips, GE, Mindray, Siemens Dräger)

The connections are subject to compatibility restrictions, specific versions and models may not be supported. Please contact Medanets Oy or your Ascom representative for details.

---

**Challenge**

Caregiving often involves recording the same data twice: first on paper while with the patient and later by computer into the Electronic Health Record. This takes the staff time and causes mistakes and delayed data updates.

**Solution**

Medanets application eliminates ineffective and unnecessary double entries along with their drawbacks completely.

**The caregiver is there for the patient, not for the computer.**

**Benefits**

- Improves patient safety
- Improves care quality
- A significant time-saver
- Increases job satisfaction
Benefits of Medanets for Caregivers

Improved care quality

- Observations and other data are recorded into right place at once – no double entries,
- Observations and measurements are accessible to other caregivers at once,
- Observations or other data are always recorded on the spot directly into specified patient data, thereby ensuring that the data goes into the right patient’s journal,
- Point-of-care filing leaves more time for personally monitoring the patient’s condition and observing any discrepancy between the measurement result and personal observation,
- Point-of-care filing supports faster observation of changes in the patient’s condition;
  - The observer sees the corresponding earlier observation value before recording the new observation value,
  - An irregular new observation value will show the change at once,
  - An irregular new observation helps to suspect measurement error.

Improved patient safety

- Incorrect recordings are reduced in average of 75%*
- Data is always up to date and available to other users,
- Patient and user electronic identification enhance data reliability.

A significant time-saver

- Eliminating double entries and point-of-care wireless filing save time significantly: up to 180 hours per ward per month.

Medanets and Partners

At Medanets, we always set the bar high and do not accept mediocrity. That is why we promise to conduct all our partnerships with reliability, faithfulness, fairness and ambition.

We value the partnership we’ve built with Ascom for the last years. We feel that we share the same values and we both have something to offer each other. From our point of view, Ascom Myco is the first smartphone designed for healthcare, genuinely taking caregivers’ needs into account. For this smartphone Ascom and its partners, including Medanets, provide applications which help daily caregiving routines.

We build long partnerships with customers and cooperation companies. Medanets solutions are always customized for the customer’s needs and delivered with the highest possible quality. Our customers receive our solutions on time and within budget.
