

APPLICATION SHEET: ACTIVE DIRECTORY INTEGRATION

Application: Unite Active Directory Integration

Seamless Unite and Active Directory integration

Simplifies management of user databases

Enables daily user database synchronization

Provides consistent approach to authentication and data security

Ascom Unite Admin supports integration with Active Directory to deliver troublefree administration, synchronization and management of users.

One database to manage simplifies administration

Large organizations have an immense challenge in keeping various user databases synchronized across multiple IT systems. This can be overwhelming at times, leading to needless errors and work inefficiencies. This challenge, along with managing secure access to resources and providing a seamless authentication experience, requires a more automated approach to optimize workflow and minimize data security risks.

Use existing Active Directory to manage users in Unite

Ascom Unite Admin integration with Active Directory (AD) can save valuable time by eliminating the need to manually configure and independently manage separate user databases. Unite’s integration to AD includes the ability to:

- Retrieve all users from AD during initial Unite deployment.
- Make user changes in AD and keep Unite system in synch.
- Enforce existing user authentication to provide secure access to sensitive information.
- Enable phone directory access over-the-air for Ascom wireless devices.

These capabilities ensure seamless interaction between Active Directory and Unite, eliminating redundant tasks and reducing potential errors.

BENEFITS

- SIMPLIFIES USER SETUP AND ONGOING CHANGE MANAGEMENT
- ELIMINATES DUPLICATE USER DATABASE MANAGEMENT
- REDUCES TIME REQUIRED FOR USER ADMINISTRATION
- SAFEGUARDS DATA AND USER ACCESS TO SENSITIVE INFORMATION

[APPLICATION SHEET: UNITE VIEW WITH DISPATCH]

Unite and AD integration Features	
Directory Lookup	Connectivity with AD to download and sync phonebook/directory for mobile user look-up over-the air.
Secure login	Access AD user-based credentials to provide secure login to sensitive information.
User database setup	Utilize user database download from AD during initial Unite system setup and implementation.
Daily user database synchronization	Perform daily synchronization from AD to Unite Admin for adds, deletes and changes to user database.
User management	Utilize AD groups to manage settings for user titles, device type, organization belonging and access rights in Unite.
