

[APPLICATION SHEET: UNITE ADMIN DESKTOP]

Application: Unite Admin Desktop

Provides a flexible, low-cost tool for deployment and administration
Performs all necessary administrative functions
Eliminates need for on-site Admin server

UNITE ADMIN DESKTOP AMINISTRATION MADE EASY

Unite Admin Desktop is a Windows® based application tool that supports Unite system configuration and administration on a personal computer. This desktop application lets you use Unite Admin without the need for a permanently installed server.

No server. No problem

Unite Admin Desktop is designed specifically for the implementation and administration of smaller facilities requiring minimal ongoing configuration changes and limited on-site IT support—no server required. It can be used to configure a Unite implementation and then be disconnected from the system altogether.

Admin Desktop provides everything required for a complete Unite deployment. It lets an administrator set up a facility user database, assign staff mobile alerts, and configure all integrations such as nurse call and patient monitoring.

Simplified user database setup

Unite Admin Desktop provides tools that easily can create and maintain a user database. Using predefined templates, administrators can build a user database off-line, then batch process them later at their convenience. These templates are an easy-to-use collaboration tool that reduces the effort required for user database setup and ongoing change management.

Assign staff to receive mobile alert messages

Unite Admin Desktop can be used for easy, straightforward staff assignment setup where these assignments are static and not likely to change. There are two staff assignment options: event assignment and location assignment. Event assignment, for example, lets you send nurse call events to one caregiver, and patient monitoring events to another caregiver. Either assignment option gives you the flexibility to ensure proper response to patient events.

UNITE ADMIN DESKTOP

Unite Admin Desktop Features	
User database management	Pre-defined templates for building and managing user database setup and implementation – work offline and upload your user changes when necessary. Supported file formats are: Excel (macro enabled), Excel, XML, and CSV.
Staff assignment	Two staff assignment options: event assignment and location assignment. <ul style="list-style-type: none"> Event assignment gives you the option to send nurse call events to one caregiver, and patient monitoring events to another caregiver. Location assignments are typically used when a mobile device, passed from shift to shift, is assigned a particular sets of patient rooms.
Integration configuration	Configure integrations to healthcare systems such as nurse call, patient monitoring and other Unite-supported systems.
Centrally stored configuration	All Unite configuration information can be centrally stored on the Unite Connectivity Manager (Unite CM) to ensure easy access by multiple users. The Unite CM includes a built-in FTP area that can be used for this purpose.

BENEFITS

- ELIMINATES NEED FOR AN ON-SITE SERVER DEDICATED TO ADMINISTRATION
- PROVIDES OFFLINE USER DATABASE MANAGEMENT
- SIMPLIFIES SUPPORT AND ADMINISTRATION DURING DEPLOYMENT
- FLEXIBLE, LOW COST TOOL FOR IMPLEMENTATION AND ONGOING SUPPORT
