

[PRODUCT SHEET]

Application: Ascom Unite Admin

Supports single-point administration for Ascom users & groups

Provides discreet log-in and administrative rights

Manages integration to other systems

ASCOM UNITE ADMIN – OPTIMIZED PERFORMANCE THROUGH IMPROVED ADMINISTRATION

The Ascom Unite Admin application facilitates the management of all users and groups from one graphical user interface, regardless of the Ascom system deployed, e.g. IP-DECT, VoWiFi, teleCARE IP. It also offers access rights on a discreet user basis, delivering increased information security for staff and patients. The Ascom Unite Admin provides operational simplicity through a unified “control panel” interface resulting in less training time and reduced administrative costs.

Supports simplified administration

The Ascom Unite Admin enables and facilitates a single point of administration of all users, devices and assignments from one graphical user interface. This software application offers significant benefits including a simplified “control panel” approach, assignments of devices (users using a specific device), discreet administrative rights assignment and single point of managing connectivity and integration to other healthcare systems like nurse call.

Manages Ascom users/groups through a single interface

All Ascom users and groups are added and managed through this single admin interface. Furthermore, users can be added to organizational and management structures offering Chief Nursing Officer (CNOs) and other administration staff a more accurate overview. Both these crucial functions ensure that less time is spent on configuring and setting up shifts with more time and focus given to delivering improved patient care.

Manage Ascom device assignment and number plans

Ascom devices can be added and assigned to specific users and numbers. Ascom Unite Admin has the flexibility to designate devices to specific individuals, roles, or as a “shared” device. A “shared” device allows a single handset to support multiple user profiles and phone numbers.

More control, less administration

The system administrator’s role is simplified by the Ascom Unite Admin application through an intuitive user interface that is easy to learn. Patient integrity and security are increased through access rights and permissions per configured user. This ensures that staff only have access to specific information necessary for their role.

Solution Benefits

- Facilitates and simplifies administration from single graphical user interface.
- Reduces system management, configuration and shift-planning time.
- Utilizes a single log-in to grant individual access as necessary.
- Centrally controls device number planning.
- Supports quicker staff responsiveness to patient needs.
- Offers a comprehensive overview of staff resources.

Key Features	
Multi-site support	Centralize administration of users/devices for multiple sites.
Active Directory (AD)	Retrieve all users from AD during initial Unite deployment; make user changes in AD and keep Unite system in synch.
User management	Add and manage all users and groups in one place.
Devices and numbers	Manage the number plan for all devices.
Integrations	Configure your integrations to patient monitoring and nurse call systems.
Locations	Define your campus with buildings and floors to be used.
Organization	Set up your organizational staff and roles to support nurse call and patient monitoring systems.
Infrastructure	Add modules to your system that handle users, numbers and integrations.
Migration to Unite Admin	Import existing user information from Unite CM to Unite Admin to populate user data.
Log Collector	Utilize 3rd party tools to create management reporting.

Unite Admin operates on a Windows environment and cost effective deployment options are available:

- Unite Admin Destop.
 - Use Unite Admin Desktop on laptop when user management and system changes are minimal and infrequent.
- Unite Admin on standard server.
 - Use Unite Admin on server for fully integrated system that requires frequent changes to user management and system configuration.
