

Ascom DURApage Product Sheet

Emergency communication solution that helps deliver effective communications, with the ability to send messages to a large number of people at once, instantly. Keeping people safe and informed.

DURApage is an essential messaging engine of DURAsuite, allowing users to send messages to any handset, pager, mobile phone or connected device via a standard web browser.

Once the message is delivered, the administrator can see the status of the message, which can be "sent", "delivered", "diverted", "absent", and "acknowledged".

Ascom's handsets have the functionality, to accept or reject a message that has been sent. If a message with a confirmation request has not been accepted within the set number of seconds, an escalation action can be started.

Key features

- Browser-based client compatible with virtually any Windows PC
- Pre-defined messages can be set up to handle common, repeatable messages
- Priority message handling
- Fully configurable emergency buttons
- Message confirmation to ensure messages are received and acted upon

The DURApage interface can be configured to display a customised emergency button with a predefined message. When selecting an alarm button, the DURApage interface will change colour to reflect the colour of the pressed alarm button.

Alerts can be prioritised, which controls the order of delivery; Crisis alerts have the highest priority and signal immediate danger or emergency. These alerts prompt the user to take immediate action.
