Workplace and Staff Safety Solution

You're in safe hands

Speed of response is critical. The Ascom Staff Safety Solution is an end-to-end platform for raising, managing, and delivering alarms to support workers in the field.

Raise a Duress Alarm
A simple push-button discretely activates an alarm.

Man-down/No-movement Alarm
'Man-down' is triggered if the handset doesn't move beyond a set threshold time and sends a warning to a user before a distress call preventing false alarms.

Reliable & Versatile Communication
The Myco Guardian can respond by initiating several different communication depending on the type of alarm raised with the geolocation information. Regardless if it is a Duress, crossed geofence, overdue check-in or man-down alert, the alerts are managed and distributed centrally.
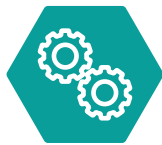

Global Positioning System
The GPS function adds system awareness to quickly detect user/handset location quickly.

Be in safe hands with Myco Guardian

Welfare & Status Tools
Check-in anytime or be automatically prompted so you never forget.

Customisable Applications
Configure the app to suit your needs either through the settings or as an administrator through the portal.

Monitor Me
Peace-of-mind features in high-risk situations by setting manual check-in schedule, switch on GPS tracking, and monitor device movement.
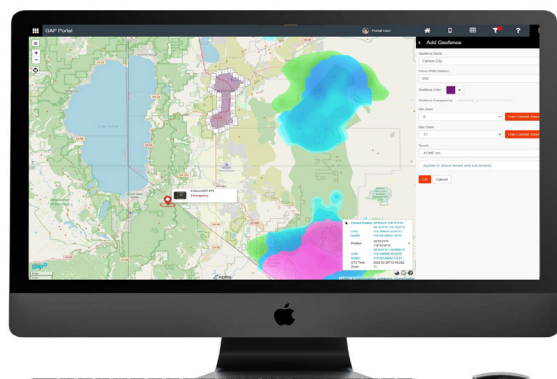

Emergency Operations Centre
Wide-area alerts from Ascom Myco handsets are sent to a 24/7/365 international emergency response coordination center, or other alarm receiving centre or an internal system.

Reporting Tool
Maintain comprehensive, time- stamped logs that include all messages, GPS coordinates and notes added by incident managers. A useful tool for journey monitoring, incident investigations, training or continuous improvements to practices.

Myco Guardian portal

Automate your actions and alters
using the ultra-flexible rules generator function

Manage your escalation and response
coordination and communication using one system

Set up automatic actions that you need
including check-in, Duress alerting, messaging and monitoring

Broadcast messages
to all or specified devices based on your needs

Customise your visualisations
using the impressive range of map tools and map types
