

Capability Statement

Ascom healthcare solutions are trusted by thousands of hospitals around the world. Interoperable with a vast range of existing healthcare systems and medical devices, these solutions help clinicians deliver even better care in even less time. And because they're modular and vendor agnostic, they're easily adaptable to changing needs and conditions. The Ascom Healthcare Platform is unique as a comprehensive, end-to-end connected care platform for long-term and acute care. To meet cybersecurity requirements within US Federal and Defense environments, Ascom has completed security assessment and organizational compliance with the National Institute of Standards Special Publications Risk Management Framework, or ("RMF"). Furthermore, in order to ensure that Ascom's cryptographic module meets government protocols required to support secure wireless communication in the Veterans Affairs and DoD healthcare facilities, Ascom recently achieved FIPS 140-2 certification under the Cryptographic Module Validation Program (CMVP).

Core Solution Competencies

- Alarm Management
- Central Monitoring
- Medical Device Integration
- Clinical Decision Analytics
- Clinical Communications
- Nurse Call Systems
- Cybersecurity
- Smartphones/Mobility
- Visualization of Patient Status
- Disparate Data Consolidation
- Training and Consulting
- Planning and Implementation
- Smartphone Applications for Healthcare

Agencies Served

- Department of Defense
- Veterans Affairs
- US Army
- US Navy
- US Air Force
- Authorized Contractors
- Homeland Security
- State and Local Government
- US Postal Service
- Indian Health Services
