Ascom delivers the Digistat clinical software solution to a leading Swiss hospital

Ascom was selected by a leading Swiss hospital to deliver the software solution Ascom Digistat. The contract amounts to around half a million Swiss francs.

The delivered solutions will support the enhanced clinical workflows such as ICU workflow management, alerting and care team collaboration and communication through the Ascom Digistat software for the integration of medical devices, a central data display, alerts, events and video surveillance of hospital beds. Moreover, the project will ensure the integration of the hospital's existing ward system and technical alarms, the Ascom Myco 2 smart device specially developed for the hospital environment, as well as dynamic assignment of alerts.

Ascom is providing these solutions for a new building of the hospital, where intensive medical care services are provided across different wards and clinical locations. The cutting-edge communication and alarm management solutions provides optimized alerting possibilities, mobilization of information and the visualization of medical devices on a centralized dashboard.

“This important client win demonstrates once again that the Ascom Healthcare Platform is a state-of-the-art workflow solution highly valued by hospitals around the world. We are happy to be able to provide our solutions to a prestigious customer in our home country and provide them with actionable clinical insights, leading to informed decisions,” emphasizes Francis Schmeer, Chief Sales & Marketing Officer of Ascom.

ABOUT ASCOM

[Ascom](#) is a global solutions provider focused on healthcare ICT and mobile workflow solutions. The vision of Ascom is to close digital information gaps allowing for the best possible decisions – anytime and anywhere. Ascom’s mission is to provide mission-critical, real-time solutions for highly mobile, ad hoc, and time-sensitive environments.
