In cooperation with a long-term sales partner, Ascom will deliver several thousand units IP-DECT devices and base stations to secure the integration of the mobile communication into the unified communication solution and to further improve the efficiency of clinical workflows.

The university hospital is already using Ascom's mobile communication solutions in sensitive clinical departments, where reliability and performance of the communication is mission-critical. Due to the longstanding and positive experience of the university hospital with Ascom's offerings, Ascom was awarded the order to introduce the mobile communication solution campus-wide and to integrate it into the new unified communication solution together with a sales partner.

Valerio Signorelli, Managing Director of Ascom DACH, says: „Together with sales partners, we want to grow faster in the DACH region, and this important order from a renowned university hospital confirms the high level of expertise that partners and customers in the healthcare sector attribute to Ascom. We are looking forward to implementing the critical mobile communication solution together with the University Hospital and our partner to lay the foundation for further optimization of clinical workflows.“

About Ascom
