Platform Improvements & Innovations (2025–2026)

This overview highlights Ascom software updates released over the past six months. Detailed compatibility information is available in the individual release notes. To access new releases, please contact your Ascom representative. We recommend starting with a feasibility study to assess the impact on your current environment, after which an upgrade plan can be defined together.

To ensure the system and apps continue to function reliably, it is essential that your backend Ascom software has been upgraded at least once in the past 12 months. Alternatively, please contact your account manager before using new app versions to perform a compatibility check.

Executive Summary

Recent updates bring significant improvements in reliability, performance, integration, and mobility experience. Customers benefit from stronger communication workflows, improved system stability, and scalable, future-ready platforms.

Mobility & Connectivity

Updates across mobile devices, applications, and infrastructure significantly improve reliability and usability. Enhancements include improved device security, better connectivity handling, and more consistent alert delivery. Customer value: fewer missed alerts, improved caregiver efficiency, and better communication in critical workflows.

Ofelia Platform

Major performance improvements and modernized user experience enhance workflow visibility and responsiveness.

TeleCare Platform

Maintenance releases focus on improving reliability, stability, and security of teleCare systems. Enhanced event handling and improved system monitoring increase resilience in care environments.

Telligence

Improvements in audio quality and system stability strengthen communication between patients and staff.

Digistat

Continued improvements in performance and workflow integration increase operational efficiency.

Unite Platform — Central Communication Backbone

The Unite platform continues to evolve as the core integration and communication layer connecting all Ascom solutions. Enhancements focus on event routing, communication reliability, and seamless interoperability across systems. Improved handling of alerts, events, and message flows ensures consistent delivery across devices and applications. Better integration with Ofelia, Telligence, mobility platforms, and external systems strengthens end-to-end workflows.
